

## DL 3155BI014 IONOPHORESIS

The ionophoresis is a technique that allows the substances in ionic form to penetrate from the surface of the skin to the deeper layers through a current. These substances, named active principles, of different dimensions and molecular weights, become extremely effective because they act inside the skin tissues at higher concentrations.

### CIRCUIT BLOCKS

- Main therapeutic effects
- Typical circuit that is used in the ionophoresis

### application modules

## DL 3155BI015 ULTRASOUND therapy

The penetration power of ultrasounds in the tissues of the human body has revolutionized the field of medical diagnostics. This property is successfully used also in physiotherapy, where ultrasounds have demonstrated a remarkable curative validity in several affections, such as arthritis, lumbagos, articular stiffness and many others.
